Superior wound closure

Effectively seals clear corneal incisions
Safe and comfortable for the patient

Clear corneal incisions leak

- Propensity for leakage has been demonstrated in several additional studies.1-4
- Challenges or forces on the eye, such as touching or sneezing, may promote leaks.
- More protection should be administered for vulnerable wounds.

Superior to sutures for prevention of wound leaks

- Significantly fewer adverse events in the ReSure group vs. the suture group (p<0.0001).
- 94.1% of sealant cases were rated “easy” or “very easy” to use.
- No safety concerns were reported.
- Patients were comfortable overall.

Clinical Use in Cataract Surgery

Standard Cataract Surgery
- Suture replacement*
- Incisions up to 3.5 mm
- Leaky wounds (temporarily dried)
- Visible internal/external gape
- Irregular/asymmetric wounds
- High myopes
- Corneal ectasia (keratoconus)*
- Phaco burn*
- Patients at Risk for Eye Trauma
  - Mentally disabled*
  - Patients in assisted living
  - Elderly

Cataract Patients with Previous Ocular Surgeries
- Post-refractive
  - RK*
  - LASIK*
  - PRK*
- Post-glaucoma filtering
  - Trabeculectomy*
  - Tube shunt*

High-Risk Cataract Patients
- MRSA*
- Monocular*
- Diabetic*
- Immunocompromised*
- Undergoing chemotherapy*
- Long-term systemic steroids*

Premium Cataract Patients
- Toric
- Multifocal
- Accommodating
- Femtosecond*

Complex Cataract Cases
- Small pupil
  - Iris hooks*
  - Malyugin ring*
- Capsular tension ring*
- Dense cataract
- Lens explant/exchange*

Combination Cataract (when cataract surgery is performed first)
- MIGS*
- Pars Plana Vitrectomy*

* Not evaluated in the ReSure Sealant pivotal clinical trial

ReSure Sealant is indicated for intraoperative management of clear corneal incisions (up to 3.5mm) with a demonstrated wound leak for which a temporary dry surface can be achieved, in order to prevent postoperative fluid egress from such incisions following cataract surgery with intraocular lens (IOL) placement in adults.
